

A minimalist stylesheet for HTML elements

No class names, no frameworks, just *semantic* HTML and you're done.

[Download HTML ↗](#)

[Download MVP.css \(10kb\) ↗](#)

PRO TIP

Add this code to a new HTML file:

```
<link rel="stylesheet" href="https://unpkg.com/mvp.css">
```

Simple, reusable components

For a clean looking design that doesn't get in the way

HTML and You're Done

MVP styles your root HTML elements, so you don't need to learn a new CSS framework or naming conventions.

[HTML Guide ↗](#)

Mobile-friendly UI

MVP is designed to look great on all browsers and devices out of the box for rapid prototyping.

It's like an amped up CSS reset that you can toss into any project to get decent styling.

MIT License

MVP is released under the permissive MIT license so you can freely use it however you'd like.

That means personal projects, commercial ventures, remixes and more are all welcome.

"By far the easiest stylesheet I've ever used.
It integrates easily into ~~one~~ all of my
startup projects."

- Andy Brewer, Author of MVP.css

Flexibility without complexity

A few, clean styling options without all the bells and whistles

	MVP.css	No CSS	Custom CSS
Mobile friendly	✓	✓	✓
Works out of the box	✓	✓	∅
Easy to customize	✓	✓	∅
Only semantic HTML	✓	✓	∅
No class names	✓	✓	∅
Perfect for an MVP	✓	∅	∅

A decent MVP in no time

More building and less designing with "set and forget" styling.

- `<a>` , `<a><i>` — outlined link buttons
- `<article>` — content area with normal styling
 - `<article><aside>` — text callout
- `<blockquote>` — quote callout
 - `<blockquote><footer>` — quote attribution
- `<body>` — default parent element
- `<button>` — form buttons
- `<code>` — inline code highlighting
- `<details>` — default expandable content section
 - `<details><summary>` — expandable heading
- `<dialog>` — popup windows
- `<div>` — unstyled element
- `<figure>` — image callouts
 - `<figure><figcaption>` — image callout captions
- `<footer>` — footer area
- `<form>` — small form area
 - `<form><input>` — short input field
 - `<form><label>` — form field labels
 - `<form><select>` — dropdown options container
 - `<form><select><option>` — dropdown option items
 - `<form><textarea>` — large input field
- `<header>` — content area with centered styling
- `<h1>` , `<h2>` , `<h3>` , `<h4>` , `<h5>` , `<h6>` — headings
- `<hr>` — horizontal rule (divider)
- `<main>` — main content area
- `<mark>` — text highlighting
- `<nav>` — top navigation
 - `<nav>` — nav links container
 - `<nav>` — nav link items
 - `<nav>` — nav dropdown container

- `<nav>` — nav dropdown link items
- `` — numbered list container
 - `` — numbered list items
- `<p>` — paragraph tag
- `<pre>` — preformatted text
 - `<pre><code>` — code block
 - `<pre><samp>` — computer output block
- `<samp>` — inline computer output
- `<section>` — content area for centered / special content
 - `<section><aside>` — content card
- `<small>` — smaller text
- `<sup>` — raised text (notification bubbles)
- `<table>` — data table
 - `<table><td>` — data table cell
 - `<table><th>` — data table header cell
 - `<table><thead>` — data table header section
 - `<table><tr>` — data table row
- `` — unordered list container
 - `` — unordered list item

Modifying the CSS variables

MVP.css includes a list of CSS variables. Editing these variables will change the styles globally.

```
:root {
  --active-brightness: 0.85;
  --border-radius: 5px;
  --box-shadow: 2px 2px 10px;
  --color-accent: #118bee15;
  --color-bg: #ffff;
```

```
--color-bg-secondary: #e9e9e9;
--color-link: #118bee;
--color-secondary: #920de9;
--color-secondary-accent: #920de90b;
--color-shadow: #f4f4f4;
--color-table: #118bee;
--color-text: #000;
--color-text-secondary: #999;
--font-family: -apple-system, BlinkMacSystemFont, "Segoe UI", Roboto,
Oxygen-Sans, Ubuntu, Cantarell, "Helvetica Neue", sans-serif;
--hover-brightness: 1.2;
--justify-important: center;
--justify-normal: left;
--line-height: 1.5;
--width-card: 285px;
--width-card-medium: 460px;
--width-card-wide: 800px;
--width-content: 1080px;
}
```

Custom styles can be added inside a `<style>` tag, or at the end of your local `mvp.css` file

Frequently Asked Questions

- ▶ Why would I use this?
- ▶ What skills will I need?
- ▶ Is there a minified version?
- ▶ How can I improve my design?
- ▶ How do I handle a user's dark mode preference?
- ▶ What if I don't like the default styles?

► What if I still don't like it?
